DOUG FIR & CEDAR TIMBERS

JANUARY 27TH, 2023

Look to IWP for the beauty, versatility, and dependability of structural wood timbers for both interior and exterior use. With both Western Red Cedar and KD Douglas Fir options, IWP has a wide selection of sizes and finishes to fit any design aesthetic.

In terms of architectural muscle, few building materials have as much beauty and strength as exposed **Western Red Cedar** beams, with renowned structural characteristics, design flexibility, and durable dependability. If properly finished and maintained, cedar can deliver decades of performance. Cedar's physical properties make it naturally resistant to decay and insect attack, and cedar is more flame-resistant than most woods, suiting a wider variety of applications. Western Red Cedar timbers are stocked in Knotty appearance grade, S4S square edge and full sawn rough. Sizes range from 4 x 4 up to 8 x 8.

IWP also offers **Kiln Dried Doug** Fir FOHC 1 & BTR timbers. Our timbers are selected for quality, seasoned, and dried slowly. This minimizes the drying stresses that cause season check. In addition, while drying does not cause defects such as twist and bow, proper drying can help minimize these defects. IWP's KDDF timbers are perfect for indoor and outdoor projects alike! Doug Fir timbers are stocked in S4S and resawn surface options in sizes from 3 x 6 up to 12 x 12.

And if we don't have what you need in stock, our Specialty Wood Products team can help with specials sizes, grades, species, and custom surfacing options!
